

JAST International Tribology Forum

「Interdisciplinary Perspective for Tribology」

Scope and Outline

Tribology is the interdisciplinary subject related to surface physics and chemistry, material science, fluid dynamics, and so on. Therefore, interdisciplinary approach is important to clarify the tribology problem. In this conference, we will organize the international forum focused on “Interdisciplinary Perspective for Tribology”, especially we take particular note of tribology on nano and micro region. In this forum, we will invite the specialists on simulation, tribology measurement, thin film, and so on. Interdisciplinary studies and discussion on the future directions of the fields are strongly encouraged.

We hope that this international forum makes a major contribution to the understanding of various tribology problems and the breakthrough of tribology is expected to arise through this international forum.

Venue

National Olympic Memorial Youth Center, Center building, Room 310
3-1. Yoyogi, Kamizono-cho, Shibuya-ku, Tokyo 151-0052

Date

May 20, 2009

Topics

Molecular dynamics, thin film growth, soft materials, scanning probe microscope technology, surface force apparatus, and so on.

Registration

Participants are required to register for JAST Conference Tokyo 2009.

Language

English is the official language of the forum.
